

EMAIL HOSTING - SETUP INSTRUCTIONS

Thank you for purchasing email hosting at Without Code!

In order to send and receive email using your custom domain, you will need to add two DNS entries to your domain. Please note that both entries are required for email delivery.

DNS Entry 1:

- Type: CNAME
- Host: mail
- Points to / Value: **mail.yourdomain.com.cust.a.hostedemail.com**
(replace "yourdomain.com" with the actual domain you are sending from)

DNS Entry 2:

- Type: MX
- Host: @ or leave blank
- Points to: **mx.yourdomain.com.cust.a.hostedemail.com.**
(replace "yourdomain.com" with the actual domain you are sending from)
- Priority: 0
- TTL (Time to Live): 1 hour or less

As an alternative to webmail, email users may setup accounts using IMAP or POP3 within any email application such as Outlook, Apple Mail, etc. We recommend using IMAP as it will sync your email across all devices you have configured.

Incoming Server Settings:

- Type: IMAP / POP3
- Server Hostname: mail.hostedemail.com
- Port: 993 (IMAP), 995 (POP3)
- SSL: SSL/TLS
- Username / Pass: Your email address and password

Outgoing Server Settings:

- Type: SMTP
- Server Hostname: mail.hostedemail.com
- Port: 465
- SSL: SSL/TLS
- Username / Pass: Your email address and password

To access email via Webmail, please visit: <https://mail.hostedemail.com>
